NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

ADE & COMPANYate of mailing

(day/month/year)

24/09/2004

Applicant's or agent's file reference FOR FURTHER ACTION See paragraphs 1 and 4 below 85084-503 International application No. International filing date (day/month/year) PCT/CA2004/000591 19/04/2004 Applicant

The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:

HER MAJESTY THE QUEEN IN RIGHT OF CANADA AS ...

The applicant is entitled, if he so wishes, to amend the claims of the International Application (see Rule 46):

The time limit for filing such amendments is normally 2 months from the date of transmittal of the International Search Report; however, for more details, see the notes on the accompanying sheet.

International Bureau of WIPO, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Fascimile No.: (41-22) 740.14.35

For more detailed instructions, see the notes on the accompanying sheet.

The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:

the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices. no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Reminders

Shortly after the expiration of 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90bis.1 and 90bis.3, respectively, before the completion of the technical preparations for international publication.

The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established. These comments would also be made available to the public but not before the expiration of 30 months from the priority date.

Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise, the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19

See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the PCT Applicant's Guide, Volume II, National Chapters and the WIPO Internet site.

NOTES TO FORM PCT/ISA/220

These Notes are intended to give the basic instructions concerning the filing of amendments under article 19. The Notes are based on the requirements of the Patent Cooperation Treaty, the Regulations and the Administrative Instructions under that Treaty. In case of discrepancy between these Notes and those requirements, the latter are applicable. For more detailed information, see also the PCT Applicant's Guide, a publication of WIPO.

In these Notes, "Article", "Rule", and "Section" refer to the provisions of the PCT, the PCT Regulations and the PCT Administrative Instructions respectively.

INSTRUCTIONS CONCERNING AMENDMENTS UNDER ARTICLE 19

The applicant has, after having received the international search report, one opportunity to amend the claims of the international application. It should however be emphasized that, since all parts of the international application (claims, description and drawings) may be amended during the international preliminary examination procedure, there is usually no need to file amendments of the claims under Article 19 except where, e.g. the applicant wants the latter to be published for the purposes of provisional protection or has another reason for amending the claims before international pbulication. Furthermore, it should be emphasized that provisional protection is available in some States only.

What parts of the international application may be amended?

Under Article 19, only the claims may be amended.

During the international phase, the claims may also be amended (or further amended) under Article 34 before the International Preliminary Examining Authority. The description and drawings may only be amended under Article 34 before the International Examining Authority.

Upon entry into the national phase, all parts of the international application may be amended under Article 28 or, where applicable, Article 41.

When?

Within 2 months from the date of transmittal of the international search report or 16 months from the priority date, whichever time limit expires later. It should be noted, however, that the amendments will be considered as having been received on time if they are received by the International Bureau after the expiration of the applicable time limit but before the completion of the technical preparations for international publication (Rule 46.1).

Where not to file the amendments?

The amendments may only be filed with the International Bureau and not with the receiving Office or the International Searching Authority (Rule 46.2).

Where a demand for international preliminary examination has been its filed, see below.

How?

Either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed.

A replacement sheet must be submitted for each sheet of the claims which, on account of an amendment or amendments, differs from the sheet originally filed.

All the claims appearing on a replacement sheet must be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims is required. In all cases where claims are renumbered, they must be renumbered consecutively (Administrative Instructions, Section 205(b)).

The amendments must be made in the language in which the international application is to be published.

What documents must/may accompany the amendments?

Letter (Section 205(b)):

The amendments must be submitted with a letter.

The letter will not be published with the international application and the amended claims. It should not be confused with the "Statement under Article 19(1)" (see below, under "Statement under Article 19(1)").

The letter must be in English or French, at the choice of the applicant. However, if the language of the international application is English, the letter must be in English; if the language of the international application is French, the letter must be in French.

NOTES TO FORM PCT/ISA/220 (continued)

The letter must indicate the differences between the claims as filed and the claims as amended. It must, in particular, indicate, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether

- (i) the claim is unchanged;
- (ii) the claim is cancelled;
- (iii) the claim is new:
- (iv) the claim replaces one or more claims as filed;
- (v) the claim is the result of the division of a claim as filed.

The following examples illustrate the manner in which amendments must be explained in the accompanying letter:

- 1. [Where originally there were 48 claims and after amendment of some claims there are 51]: "Claims 1 to 29, 31, 32, 34, 35, 37 to 48 replaced by amended claims bearing the same numbers; claims 30, 33 and 36 unchanged; new claims 49 to 51 added."
- [Where originally there were 15 claims and after amendment of all claims there are 11]: "Claims 1 to 15 replaced by amended claims 1 to 11."
- [Where originally there were 14 claims and the amendments consist in cancelling some claims and in adding new claims]:
 "Claims 1 to 6 and 14 unchanged; claims 7 to 13 cancelled; new claims 15, 16 and 17 added." or "Claims 7 to 13 cancelled; new claims 15, 16 and 17 added; all other claims unchanged."
- 4. [Where various kinds of amendments are made]: "Claims 1-10 unchanged; claims 11 to 13, 18 and 19 cancelled; claims 14, 15 and 16 replaced by amended claim 14; claim 17 subdivided into amended claims 15, 16 and 17; new claims 20 and 21 added."

"Statement under article 19(1)" (Rule 46.4)

The amendments may be accompanied by a statement explaining the amendments and indicating any impact that such amendments might have on the description and the drawings (which cannot be amended under Article 19(1)).

The statement will be published with the international application and the amended claims.

It must be in the language in which the international appplication is to be published.

It must be brief, not exceeding 500 words if in English or if translated into English.

It should not be confused with and does not replace the letter indicating the differences between the claims as filed and as amended. It must be filed on a separate sheet and must be identified as such by a heading, preferably by using the words "Statement under Article 19(1)."

It may not contain any disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

Consequence if a demand for international preliminary examination has already been filed

If, at the time of filing any amendments under Article 19, a demand for international preliminary examination has already been submitted, the applicant must preferably, at the same time of filing the amendments with the International Bureau, also file a copy of such amendments with the International Preliminary Examining Authority (see Rule 62.2(a), first sentence).

Consequence with regard to translation of the international application for entry into the national phase

The applicant's attention is drawn to the fact that, where upon entry into the national phase, a translation of the claims as amended under Article 19 may have to be furnished to the designated/elected Offices, instead of, or in addition to, the translation of the claims as filed.

For further details on the requirements of each designated/elected Office, see Volume II of the PCT Applicant's Guide.

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Section IV

- 1 The application lacks unity within the meaning of Rule 13.1 PCT, and relates to the following separate inventions:
 - Invention I: A method for detecting and identifying an orthopoxvirus within a sample by PCR-RFLP analysis of the HA gene; a pair of primers for said method; a kit comprising said primers (claim 3 fully, claims 1,2,5-8 partially).
 - Invention II: A method for detecting and identifying an orthopoxvirus within a sample by PCR-RFLP analysis of the crmB gene; a pair of primers for said method; a kit comprising said primers (claim 4 fully, claims 1,2,5-8 partially).
- The above inventions are linked only in that they both relate to methods for detecting and identifying an orthopoxvirus within a sample by PCR-RFLP analysis of a specific gene of the orthopoxvirus genome. However, such methods are known in the art (cf D1, D2). Therefore, the aforementioned link cannot be considered a single inventive concept in the sense of Rule 13.2 PCT.
- In the light of the prior art, the problem to be solved by the present application is the provision of alternative methods for detecting and identifying an orthopoxvirus within a sample by PCR-RFLP. This problem is solved separately by each of the 2 inventions, which target different genes for the analysis.
- Due to the fact that no other feature could be identified which might be considered to represent a common inventive link between the subject-matters of Inventions 1 and 2, the present application does not meet the requirements of Rule 13.1 PCT with respect to unity of invention, and is considered to consist of the two separate inventions given above.
- 5 The ISA has decided not to request additional fees. Thus an opinion is provided herein for both inventions.

Section V

1 Reference is made to the following documents:

- D1: LOPAREV ET AL: "Detection and differentiation of old world orthopoxviruses: restriction fragment length polymorphism of the crmB gene region." JOURNAL OF CLINICAL MICROBIOLOGY. JAN 2001, vol. 39, no. 1, pages 94-100
- D2: ROPP ET AL: "PCR strategy for identification and differentiation of small pox and other orthopoxviruses" JOURNAL OF CLINICAL MICROBIOLOGY, vol. 33, no. 8, August 1995, pages 2069-2076
- 2 Novelty (Art.33(2) PCT)
- 2.1 D1 discloses a method for the detection and differentiation of orthopoxviruses comprising the following steps (cf p.95, col.1, para.3 col.2, para.1):
 - adding to the sample each oligonucleotide of the primer pair VL2N and VL33 to amplify the crmB region of orthopoxviruses (cf also p.95, col.2, para.2);
 - b. adding to the PCR product a restriction enzyme NlaIII, Acil, Ncil or Sau3A;
 - c. determining by gel electrophoresis if enzyme digestion has occurred.

The method of D1 therefore comprises all of the features of claims 1 and 2, thereby rendering said claims not novel.

- 2.2 The prior art does not disclose primer pairs comprising 12 or more consecutive nucleotides of SEQ ID NOS 1 and 2 or SEQ ID NOS 3 and 4. Therefore, the method of dependent claims 3 and 4 in which said primer pairs are used is novel.
- 2.3 Similarly, claim 5, directed to said primer pairs per se, and claims 6-8, directed to a kit comprising at least one of said primer pairs, appear to be novel.
- 3 Inventive step (Art.33(3) PCT)
- 3.1 The subject-matter of claims 3-8 differs from D1, relating to PCR-RFLP analysis of the crmB gene and from D2, relating to PCR-RFLP analysis of the HA gene, by the primer pairs used for the PCR amplification. Claim 3 further differs from D2 in the restriction enzymes used for the RFLP analysis.
- 3.2 The primer pairs defined by SEQ ID NOS 1 and 2 or 3 and 4 were designed by sequence alignment of all isolates of variola, monkeypox, camelpox, cowpox and vaccinia viruses; the amplicons they provide contain conserved restriction sites for

RFLP analysis, and the primer pairs allow highly sensitive detection of viral load (present description, p.9, l.31 - p.10, l.8).

- 3.3 The problem to be solved by claims 5-8 is the provision of primer pairs and kits comprising the same that result in more sensitive detection of orthopoxviruses. The solutions of SEQ ID NOS 1 and 2 for analysis of the HA gene or of SEQ ID NOS 3 and 4 for analysis using the crmB gene are not suggested in the prior art. Therefore, the subject-matter of claims 5 and 6-8 is considered to involve an inventive step.
- 3.4 The problem to be solved by claim 3 over D2 and by claim 4 over D1 is considered to be the provision of a more sensitive method for the detection and identification of orthopoxviruses. The solutions, namely the use of the primer pair defined by SEQ ID NOS 1 and 2 for targeting the HA gene or the primer pair defined by SEQ ID NOS 3 and 4 for the crmB gene, are considered to solve the problem only for certain embodiments covered by the claims, as only specific combinations of primer pairs and restriction enzymes will provide the desired result (Sau3AI and SpeI provide restriction patterns with the amplicon of the HA gene; DraI, Alw44I, SspI provide a banding pattern from the crmB gene: description, p.8, I.13-18).

Therefore, no inventive step can be acknowledged for claims 3 and 4, as the problem is not solved over the entire scope of the claims (cf also item VIII.2).

Section VIII

- In the description, reference is made to restriction analysis using NIaIII enzyme in connection with Fig.1 (e.g. p.8, l.18-21; p.13, l.25-27), yet said figure does not show any restriction sites for NIaIII. Therefore, said reference is unclear (Art.6 PCT), as is the actual effect of using NIaIII, and the particular amplicon which it is used to digest.
- Claim 1 is not supported by the description as required by Article 6 PCT, as its scope is broader than justified by the description and drawings. The reasons therefor are the following: said claim is directed to a method using at least one pair of primers directed to the HA or crmB gene of the orthopoxvirus genome and at least one restriction enzyme selected from Sau3AI, SpeI, DraI, HpaI, SspI, Alw44I

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/CA2004/000591

and NIaIII. However, none of these restriction enzymes would appear to produce a banding pattern for both target genes. Such a method is supported using only specific combinations of primer pairs and endonucleases.

The same objection applies to claims 2-4 and 7.
